

FURIX

FUP-BW-1A

Veterinary Machine Diagnostic Ultrasound System

01 15-inch full-view medical LCD display

- Dual probe interface allows simultaneous use of two probes
- Built-in lithium battery, power off for 5 hours
- Adopt ARM chip architecture to provide stable and simple operating system
- The host automatically recognizes and uses multiple array probes
- Support harmonic imaging
- B, B+B, B+M, M, 4B display modes
- Special software for small animals - supports routine measurement of baby date, heart rate and other tissues and organs of small animals
- Graphic management system - check images can be directly stored, exported, browsed, automatically import selected diagnostic images and check measurement data
- Languages: Chinese, English, French, Spanish, German, Portuguese, Russian, Turkish, Arabic, customized languages according to different users
- Combined with a large number of clinical experience, the machine
- has different preset adjustment conditions for different parts or organs examined by different departments and has a one-click optimization function

3.5MHz Convex Probe

5MHz Micro-convex probe

7.5MHz Linear Probe

Trans-rectal probe

Specification

Monitor:	15-inch high-resolution display
Platform:	Stable ARM operating
Element:	Multiple array transducers available (80/96/128 elements)
Probe connector:	2
Large capacity lithium battery for up to 5 hours	
Professional veterinary measurement for any kinds of animal	
Built-in instruction manual	
External USB storage, single image storage time ≤ 10 seconds	
Position marking: 97 types	
Various pseudo-color options
